2017 Solar Eclipse; Mon. 8/21/2017

What Is a Solar Eclipse?

Sometimes when the moon orbits Earth, it moves between the sun and Earth. This doesn't happen every month, because the moon doesn't orbit in the exact same plane that the sun and Earth do – but it does happen occasionally. When it happens, the moon blocks the light of the sun from reaching Earth. This causes an eclipse of the sun, or solar eclipse. During a solar eclipse, the moon casts a shadow onto Earth. **NEVER look directly at the sun: It can permanently damage your eyes! You must use proper safety equipment to look at any type of solar eclipse.**
